Miriam College · AVA Data Solutions Inc.

Miriam College HRIS — Bid Proposal (Draft)

Prepared for: Miriam College — ICT Office & HR Division
Re: Human Resources and Information System (HRIS) — response to Terms of Reference
Status: Proposal draft. Commercial terms in §10 are firm (Year-1 all-in ₱1,980,000 + 12% VAT; 30/40/30 payment). A few technical details remain to be confirmed with the College before official submission.

> This document covers the **proposal-stage** requirements of the TOR (architecture, security, integration, migration, implementation, training & support, pricing). The **functional and AI capabilities** are demonstrated in the working prototype; see `TOR-COMPLIANCE.md` for the requirement-by-requirement matrix.

1. Executive Summary

We propose an integrated, secure HRIS covering the full employee lifecycle — Recruitment, Onboarding, 201 Records, Timekeeping, Payroll, Benefits, Performance & Faculty Ranking, and Offboarding — unified by a single employee master so data flows between modules **without duplicate encoding**. The platform provides role-based self-service for HR, management, supervisors, employees, and applicants across the Quezon City, Nuvali, and Alviera campuses, with **AI-assisted insights that are advisory and human-approved by design**.

2. Solution Overview

- **Modules:** Recruitment/ATS, Onboarding, Employee 201, Timekeeping & Attendance, Payroll & Compensation, Benefits, Performance/Faculty Ranking, L&D, Offboarding/Clearance, Reports & Analytics, Settings/RBAC, AI Governance.
- **Experience:** 5 role-scoped portals + a public careers site; multi-campus; responsive web + roadmap native mobile.
- **Proof:** a clickable prototype demonstrates each module and the end-to-end integration story.

3. Technical Architecture & Hosting

The College may choose any of three deployment models; we recommend **cloud-based** for fastest value and lowest operational burden.

Option	Summary	Notes
Cloud (recommended)	Managed hosting in a Philippine/regional data center	Elastic scaling; 99.9% availability target; managed backup & DR
On-premises	Deployed on College servers	Min. spec: `[app/web, DB, OS, storage, network]` to be detailed
Hybrid	Sensitive data on-prem, app tier in cloud	For specific data-residency needs

- **Stack:** web application + relational database + secure APIs; horizontally scalable app tier.
- **Data location / region:** `[PH region / provider]` . **Third-party processors:** `[list]` . **Major dependencies:** `[email/SMS, biometric SDK, AI provider]` .
- **Scalability:** supports current and projected workforce and additional campuses.

4. Security, Privacy & Recovery

- **Access:** MFA for privileged roles; **role-based authorization (RBAC)**, least-privilege.
- **Encryption:** TLS 1.2+ in transit; AES-256 at rest.
- **Audit:** immutable logging of material system and data actions.
- **Backup & recovery:** daily backups; **RPO** **`[≤15 min]`** , **RTO** **`[≤4 hrs]`** ; DR site/region.
- **Sensitive documents:** medical and other uploads access-restricted and encrypted.
- **Compliance:** aligned to the **Data Privacy Act of 2012** and NPC guidelines; defined **security-incident & breach-notification** procedures.

5. Integration Approach

- **Among modules:** one employee master; Recruitment → Onboarding → 201 → Timekeeping → Payroll → Benefits share data (no re-encoding).
- **Accounting SAP:** payroll **journal entries** posted via secure API, balanced and validated before posting.
- **Biometric devices:** M10 Fingerprint & Facial, plus web/mobile/GPS capture.
- **APIs:** documented REST APIs; documented **data mapping, interface specs, validation, error handling, reconciliation, monitoring**; secure system-to-system authentication.

6. AI Governance & Responsible Use

- Each AI capability identified as **native / integrated / third-party / roadmap** (see matrix).
- **Human oversight retained** for all employment, compensation, ranking, promotion, benefits, and separation decisions — **AI never auto-executes**.
- **Explainability:** every AI score/flag shows its basis (competency breakdowns, weighted factors, flagged records).
- **Data handling:** disclosure of whether prompts/documents/outputs are retained or used to train models — our stance: `[not used to train external models]` .
- Known limitations, validation practices, auditability, and human-review mechanisms documented.

7. Data Migration Approach

Planning → data mapping → **cleansing** → test migration → validation → **reconciliation** → production cutover. Agreed employee information and historical records migrated with integrity; sign-off gates at each stage.

8. Implementation Plan & Schedule

Phase	Activities	Indicative duration
1. Initiation & fit-gap	Validate requirements vs TOR; project charter	~2–4 weeks
2. Configuration	Org, roles, workflows, pay rules, benefits	~6–10 weeks
3. Integration & migration	SAP, biometrics, APIs; test migration	~4–8 weeks (parallel)
4. Testing	Functional, security, integration, **UAT**	~3–5 weeks
5. Training	Admin & all user groups	~2–3 weeks (parallel)
6. Go-live & hypercare	Cutover, **rollback plan**, stabilization	~2–4 weeks
Total		**~6 months** (scope-dependent)
- **Team structure:** PM, solution architect, module consultants, integration & data engineers, trainer, support lead.		
- **Deliverables:** configuration docs, test results, training materials, runbooks, knowledge transfer.		

9. Training & Support

- **Training:** role-based for HR, payroll, benefits, recruitment, performance, faculty ranking, L&D, ICT, finance, supervisors, and employees; user/admin/technical guides and materials.
- **Support channels:** phone, chat, email, onsite, remote.
- **Availability:** minimum **8×5**, with **24/7 where appropriate**.
- **SLAs by severity (proposed):** P1 (system down) respond ≤1 hr / resolve ≤4 hrs · P2 (major) ≤4 hrs / ≤1 day · P3 (minor) ≤1 day / ≤3 days · P4 (request) scheduled.
- **Options: 1-year** and **3-year** support packages — scope and pricing in §10.
- Release, patch, upgrade, and maintenance notifications.

10. Commercial Offer (firm — subject to signed contract)

Scope basis: ~412 employees · 3 campuses (Quezon City, Nuvali, Alviera) · all modules + AI + Faculty Ranking + Employee Self-Service + installable mobile (PWA) + SAP journal-entry interface + M10/facial biometrics.

10.1 Year-1 all-in contract price

	Amount (₱)
Year-1 all-in contract price (VAT-exclusive)	**1,980,000.00**
Add: 12% VAT	237,600.00
Total contract price (VAT-inclusive)	**2,217,600.00**

Everything in the Year-1 price — one fixed fee, no hidden add-ons:
- Full system **build, configuration & customization** of all TOR modules (Recruitment/ATS, 201 File, Timekeeping, Payroll, Benefits, Performance & Faculty Ranking, Offboarding) with AI capabilities and multi-campus setup
- **SAP journal-entry integration** (payroll → Accounting SAP interface)
- **Biometric hardware** (M10 fingerprint + facial units) and device integration
- **Data migration** (1 school-year of legacy records — mapping, cleansing, validation, reconciliation)
- **Cloud hosting** for Year 1 (PH/regional region, backup & DR)
- **Role-based training** for all user groups + admin/technical guides
- **Go-live, hypercare & post-go-live support** (8×5) through Year 1
- Statutory-table maintenance (BIR/SSS/PhilHealth/Pag-IBIG) for Year 1

10.2 Payment schedule (30 / 40 / 30)

Milestone	Trigger	%	Net (₱)	+12% VAT (₱)	Invoice total (₱)
Down payment	Contract signing / project kickoff	30%	594,000	71,280	**665,280**
Delivery	**UAT sign-off** by Miriam	40%	792,000	95,040	**887,040**
Retention	**90 days after UAT sign-off** (covers go-live & stabilization)	30%	594,000	71,280	**665,280**
Total		100%	**1,980,000**	**237,600**	**2,217,600**

The final 30% falls due 90 days after UAT sign-off, so it is paid only after go-live and the hypercare/stabilization window — giving the College assurance the system performs in production before the last tranche is released.

10.3 Year-2 onward (recurring — proposed, to confirm)

After Year 1, an annual **software licence + cloud hosting + support & maintenance** subscription keeps the system live, patched, and statutory-compliant:

Item	Proposed (₱, VAT-excl.)	Note
Annual subscription (licence + hosting + 8×5 support + statutory updates)	**780,000 / yr**	~₱158 PEPM — below PH mid-market (₱150–300)
3-year lock option (Years 2–4)	**~₱2,106,000** (≈ ₱702,000/yr, ~10% discount)	TOR asks for 1-yr & 3-yr options

10.4 Optional add-ons (not in the base price)

- **24×7 premium support** (payroll cutoff / critical windows): **≈ ₱180,000 / yr**
- **Additional school-years of data migration** beyond the first: per-year quote
- **On-premises / hybrid hosting** instead of cloud: infrastructure cost per the College's environment
- **Additional biometric units** beyond the surveyed devices: at cost + install

10.5 Assumptions & dependencies

College provides: **SAP interface specifications**, source-data extracts in the agreed format, biometric-device network access, and campus network/VPN access. Pricing assumes **cloud hosting** and a **~6-month delivery** (see §7–8). Delays caused by pending inputs (e.g., SAP specs, data readiness) may shift milestone dates but not the fixed price.

> **Competitive check.** The Year-1 all-in ₱1.98M equals a blended **~₱200 per-employee-per-month** — mid-market rate (PH 2026: SME ₱79–149, mid-market ₱150–300, enterprise ₱300+) while delivering **enterprise scope** (AI, SAP, faculty ranking, biometrics, hosting, hardware). Akrivia's 2026 worked example for a 200-employee/3-region company is ₱1.3M–2.19M over **three years** for software alone; our offer bundles build, hardware, SAP, hosting, and support into one competitive Year-1 fee.

11. Technical Compliance Matrix

Per the TOR, a completed matrix (Fully / Partially / Not Compliant; Standard / Configurable / Custom / Third-Party) is provided — see `TOR-COMPLIANCE.md`, to be finalized into the official submission format.

Commercials in §10 reflect the agreed Year-1 all-in deal (₱1,980,000 + 12% VAT; 30/40/30 tied to signing / UAT sign-off / 90 days after). SLA severities in §9 and Year-2 renewal in §10.3 remain to be confirmed before official submission.
